

Upgrade Rancher (RKE)

Lab 11

What are you Learning?

In this lab you'll upgrade your RKE backed Rancher installation.

Why is it important?

New versions of Rancher come with new features. They also support newer versions of Kubernetes. You may not want to replace an existing Rancher installation in your environments every time a new version launches, so being able to update to a new version is tantamount.

Upgrade Rancher

1. Review version [release notes in the forums](#), and [any known upgrade issues](#).
2. [Backup your Kubernetes cluster](#), where Rancher is installed.
3. [Update your Helm Repository](#), so the new version of Rancher is available.
4. [Upgrade Rancher](#), be certain to use the same values you used to install your cluster, except for the new version number.

Testing That It Works

1. You should be able to navigate and login to your cluster. You'll notice the updated version in the lower right-hand corner of the screen.

The screenshot displays the Rancher management interface. At the top, a dark navigation bar contains the Rancher logo and menu items: Global, Clusters, Apps, Settings, Security, and Tools. Below this, the 'Clusters' section is active, featuring a search input field and an 'Add Cluster' button. A table lists the available clusters:

State	Cluster Name	Provider	Nodes	CPU	RAM
Active	local	Imported v1.17.5	1	0.4/4 Cores 10%	0.1/15.5 GiB 1%

The footer of the interface shows the version 'v2.4.2' and provides links for 'Help & Docs', 'Forums', 'Slack', and 'File an Issue'. On the right side of the footer, there is a language selector set to 'English' and a 'Download CLI' link.

[Consider what you would do if something failed](#). This is why it's important you take a backup prior to performing an upgrade.
